Skills

- C++
- Python
- Object-Oriented Programming
- Data Structure
- Algorithm
- Database Design
- Django
- Django Rest Framework
- Html
- Css
- Linux Commands

Projects

ICPC Platform (current project):

- An ICPC Platform System is software built to handle the primary main functions of an ICPC. Platforms rely on communities and famous road maps. The platform system helps members to train on the open rounds for any community and helps leaders to create communities, as well as members' subscriptions and profiles.
- ICPC Platform systems also involve full automation functions that help communities.

Tabibak:

- medical application to predict heart disease, diabetes, and kidney disease and contains some tips to maintain your health, use user authentication and Ai for models. ([code](#)).

Library System:

- In the library system with Django, you can sign up on the website, edit your profile, the user can add reviews about books, and the admin can add and delete books ([code](#))
